

Empower your Frontline workforce

with augmented reality workflows

Enterprise productivity platform TeamViewer Frontline

Digitalize and streamline processes for your frontline workforce with augmented reality workflows – seamlessly integrated with wearables and mobile devices – increasing productivity, efficiency, and quality along the entire value chain.

Our full-service approach

We act as a one-stop-shop by not only offering our enterprise software solutions but also providing you with partner hardware and comprehensive services.

The starting point for a Frontline project is a thorough consultation and situation analysis to get an overview over your use case and specific requirements. Based on that, we customize our solutions to meet your needs, using Frontline components and features.

Jointly, we select the optimal hardware and deploy our [Frontline solutions](#) in your factory

plant or warehouse. In the productive phase, we provide a help desk and technical support with individual service level agreement to ensure your success.

warehouse.

What is Frontline?

Frontline tools

Within our Frontline platform we offer the right tools for different use cases: With the graphical Frontline Creator you can easily configure 2D augmented reality applications without programming knowledge.

In a three-dimensional context, the Frontline Spatial Editor is available. From here you create your own 3D work instructions via drag & drop and point & click.

Device applications

The actual support of the frontline workforce takes place on the devices. All [Frontline solutions](#) offer an adaptive user interface and clear visuals to support manual work processes. So the digital workplace adjusts to your use case and your workforce.

Frontline Command Center

The central management console allows you to easily manage our modular Frontline solutions, as well as assign tasks to your staff or provide

assistance via remote support. With our web-based tool, you can also analyze KPIs, overview tasks and devices, and generate reports.

Frontline tools let you easily configure customized and device-agnostic applications for wearables and mobile devices.

Your benefits

Scalability

Companies can easily transfer requisites from one site to the next

Security

Protect your intellectual property rights of your workflows

Flexibility

Forward task changes immediately to your frontline workforce

Independence

No external resources like additional software or hardware

Usability

Easy to use with no programming know-how required

Agility

Create and edit your AR workflow applications instantly

Frontline improves manual work processes across industries on the basis of the latest wearable computing technologies.

80%
