SAM MOT

An MOT for SAM?

Once a year you take the time to MOT your vehicles, those indispensable assets to you. So why not take the time to get a check up of other valuable assets, like software?. Our SAM MOT is designed to not only give you insight into your Software Asset Management (SAM) Processes & Procedures, but also into your SAM program and strategy as a whole and the data it is comprised of. This service includes a 365 Health Check (powered by TBSC) to help optimise your Microsoft 365 estate. The result is a clear scoring against the ITIL Standard with an improvement plan on how to manage your software assets optimally and cost effectively moving forward.

Why is a SAM MOT so important?

Unlike the way it is often treated, SAM is not a one-time project. It is an important cog in the machine that is your organisation. You may be surprised to learn that software accounts for, on average, 34% if it budgets. A SAM MOT is the first step to maturing your SAM program; one which can see a reduction in helpdesk call length by up to 20% ans save an average of $390 per PC in unused software. You might also be part of the 80% of customers that buy a SAM tool and fail to see a return on investment on their purchase. A SAM MOT will help you recognise that value.

Choose a plan that suits you
Whether you are a small non-profit or a large corporation (and anything in between), EasySAM has the right SAM MOT Plan to suit your size and budget. Our more comprehensive plans even include access to our library of process templates.
