ADOBE SIGN

Adobe Sign is a cloud-based e-signature solution that allows you to send, sign, track, and manage signature processes using a browser or mobile device.
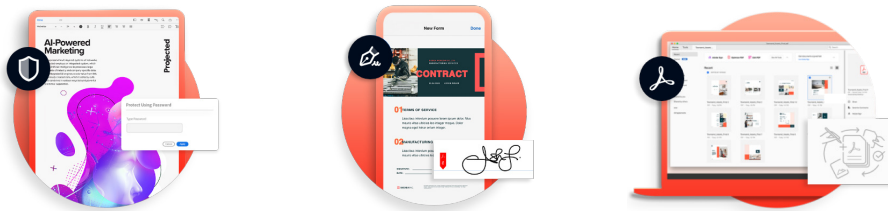

What are the key features?

Apply to the entire document
Cryptographic binding is applied to the entire document with a tamper-evident seal. IF a document has been changed, Adobe Acrobat and Acrobat Reader software display a notification that the document's certification is no longer valid.

Can be tracked and managed efficiently
Electronic signature processes driven by Adobe Sign track document status in real time, get notified when your documents are signed, and send reminders are needed.

Can't be duplicated with a copier or scanner
With Adobe Sign, a signature is bound to a specific instance of the document and tracked as part of a multi-step signature process.

Can't be backdated
With Adobe sign, the time is centrally managed by the hosted service and backdating is not allowed.

Are much easier to authenticate
With Adobe Sign, multiple authentication methods can be applied to guarantee the identity of people signing documents.

Reduce storage cost
Electronic document storage is less expensive than renting floor space for paper and filing cabinets.

Prevent documents from being defaced
Electronic signature processes driven by Adobe Sign protects the integrity of the original document so information cannot be hidden or removed.
