

BECHTLE MANAGED CLOUD WORKSPACE

Great desktop experience doesn't need to be confined to your office.

Provide your users with a seamless working experience with Azure Virtual Desktop solution delivered by Bechtle.

Your strong IT partner.
Today and tomorrow.

BECHTLE

Recent months have forever changed how we view office work. While the needs of your organisation might have changed due to unexpected circumstances, the radical shift has exposed how current RDS setups might be limiting the potential of your employees and your business, in and out of the office environment:

Broken user experience

Lack of integration with popular productivity and collaboration tools.

Limited control

No unified way of managing and monitoring the setup and users.

High Capex costs

Infrastructure installation, upgrade, and configuration drives up costs.

Scale for the future with a virtualised desktop infrastructure.

Underscored by Microsoft latest technology, Bechtle's Azure Virtual Desktop solution delivers unparalleled scale and user experience – while providing you with full control over security and compliance.

Deliver Windows 10 desktops and to your users, wherever they are

Fully optimised for Windows 10 and Office 365, AVD provides the flexibility and efficiency your teams need, virtualising Microsoft 365 apps to run in multi-sessions.

- Provide a seamless desktop experience across devices and locations
- Let your employees work with the tools they know and love, even remotely
- Leverage multisession capabilities to run user sessions easily

Improve productivity within your business

With an uncompromised desktop experience, your employees can reduce the frustrations related to multiple logins and delete inaccessible apps or documents.

- Simplify deployment and desktop management for your IT teams
- Benefit from the seamless experience with other productivity and collaboration tools
- Enable easy access to all the apps and information your staff requires

Keep your applications and data secure and compliant at all times

With your data stored securely in Azure rather than local desktops, AVD and Microsoft 365 allow for fine grained control over its access.

- Benefit from proactive monitoring and alerting
- Address any threats immediately
- Meet the evolving compliance requirements

Gain greater cost efficiencies by optimising your spend

Remove dependence on desktop computers and software licenses and move to an Opex model.

- Reduce desktop, infrastructure and upgrade management costs
- Run concurrent and multiple user sessions with greater cost-efficiency
- Pay only for what you use, scaling based on your needs

Seamless integration that complements or replaces your current setup.

If you're currently running any virtual desktop environment, such as an RDS system or those from Citrix or VMWare, at Bechtle we ensure smooth integration of Azure Virtual Desktop with both – so you can reap the benefits of the advanced desktop virtualisation (even in a hybrid model) while continuing to extract value from your RDS investments.

Extend your current capabilities

Leverage the Azure Virtual Desktop platform, but take it one step further by simplifying day-to-day management of your applications, desktops, and Microsoft entitlements.

Enhance your security features

Add an extra security layer you need to meet strict company guidelines for confidential materials, including session watermarking and identity and application protection.

Adopt a more cost-effective model

Run Azure Virtual Desktop within Citrix or VMWare environment in Azure, and optimise compute, networking, licensing and operational costs.

Construct the workplace solution for the future.

Bechtle's Managed Cloud Workspace is an end-to-end solution that helps you build a modern and productive workspace driven by the cloud's flexibility and scale.

Alongside Azure Virtual Desktop, you can leverage the latest Microsoft technology to drive further collaboration, scale and security inside your organisation – while reducing costs.

Why Bechtle.

Bechtle's global view and local presence ensure we understand the needs of your business, and the technical excellence of our teams enables us to deliver future-oriented IT to drive your success.

Guiding you on your transformation

We will help you design the right solutions, prepare your business for the change, implement it, and continuously optimise the new setup.

Complete, end-to-end solutions

Our end-to-end solutions meet the rising demand for flexible and cost-effective services tailored to unique business needs.

Knowledge and expertise

With over 35 years of experience and our Azure Expert MSP status, we always deliver successful projects for our customers.

Scale for the future with a flexible workplace infrastructure.
