Cloud Data
Management

**Governance &
Compliance**

Cloud Data Management™ enables organizations to achieve unmatched data management and protection, reusing data to drive innovation across data centers and cloud. It also accelerates business agility through automating core backup and recovery capabilities, enabling data mobility, visibility, intelligent orchestration, governance and security.

Governance & Compliance

The number of regulations you are facing is continually changing, as is the cost of compliance each year. Dealing with sensitive information daily, you need to deliver services without compromising your data. Data protection systems need to be an integral part of your security and governance posture. Many companies continue to rely on manual processes, using legacy or ad-hoc cloud systems to protect and audit data, creating isolated pockets of visibility. Increasing the risk that cyber-attacks go unnoticed and the effort for compliance tracking. Today's businesses continually face many compliance and security challenges, including:

- **Concern about the risk viruses and ransomware have to data, which could drain company resources**
- **Frustrated by fallout and impact when a bad patch or upgrade causes unplanned downtime**
- **Unsure that company data is compliant with required regulations – even when restoring previously backed-up data**
- **Struggling to produce consistent reporting and analysis that will pass the rigors of any compliance audit**

Veeam® is focused on driving advanced solutions helping organizations compliance and security posture. By building on a strong foundation of backup and intelligent recovery, organizations can reuse their backup data, driving faster business acceleration. You can also assess application security, compliance and privacy needed to adhere to strict guidelines before deployment – without impact on the production system or increased cost, and:

- **Perform security scans before exposing data back into production environments, ensuring all workloads will be free of viruses and ransomware**
- **Isolate testing for new patches and upgrades to enable hassle-free testing without production impact**
- **Assure compliance mandates are adhered to, including GDPR and CCPA, through Staged Restore capabilities**
- **Ensure compliance requirements with rigorous reporting and actionable documentation**

Solution Mapping

Veeam Cloud Data Management Platform provides the key technologies to assist your governance and security posture. Together it enables a powerful integrated solution.

Governance and Compliance

Each feature of the Veeam Cloud Data Management Platform is specifically designed to help organizations more, including significant solutions such as:

Dynamic documentation	Ransomware planning	Secure Restore	Data retention & PII tagging
Automatically create and keep updated all compliance and DR documentation on demand	Detect ransomware triggers in real time and automatically respond prevent further infection	Scan backups for threats before introducing them to production – fully-integrated anti-virus scan as part of any recovery	Set automated data retention policies and tag personal data to ensure strict recovery guidelines
