## APP IN A DAY WITH PERSPICUITY

As Microsoft 365 becomes established in the modern workplace there is a demand to get more from the service. One of the growth areas is the ability to capture, process and present data using the Microsoft Power Platform, and this is integrated as part of the Microsoft 365 Service.

Learning how to develop a no code / low code solution can be challenging and without hands on training it is difficult to learn the best practice approach for delivering Apps.

### Why App in a Day?

With the 'App in a Day' package we will enable your team to build an app to capture the data, automate the business process around that data and highlight how to present this with reporting.

You will learn with hands on labs covering:

- ✔ Building a Power App in your environment
- ✔ Structuring the data capture with storage options
- ✔ Processing the data with Power Automate
- ✔ Demonstrating the reporting with Power BI

At the end of the session you will go away fully understanding what is possible and how it can be achieved to enable you to start building apps and processes in your organisation.

Just beginning your Microsoft Teams journey? Already up and running and need help with scalability? Learn more about Perspicuity's other services for Microsoft Teams or 'Teams Governance' by speaking to your account manager.

### At a Glance

Build an app in your organisation to deliver modern and simple tools for colleagues to review and capture data driven solutions.

### Technologies

- Power Apps
- Power Automate
- Power BI
