veeAM

Cloud Data Management™ enables organizations to achieve unmatched data management and protection, reusing data to drive innovation across data centers and cloud. It also accelerates business agility through automating core backup and recovery capabilities, enabling data mobility, visibility, intelligent orchestration, governance and security.

Backup & Recovery · **Cloud Mobility** · Private Cloud · Your Data · Public Cloud · **Governance & Compliance** · **Monitoring & Analytics** · **Orchestration & Automation**
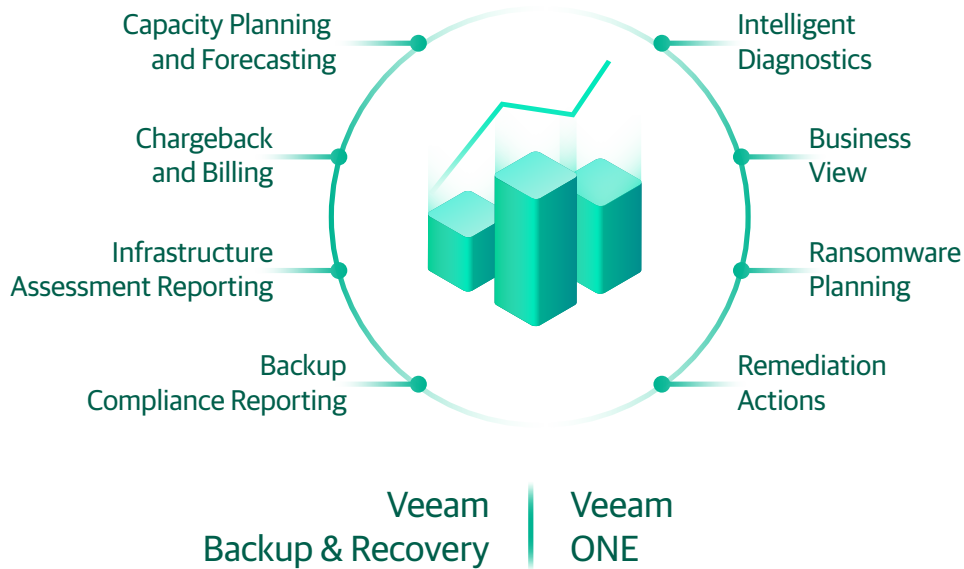

Monitoring & Analytics

Modern management systems need to be always vigilant, intelligently looking at event data and reacting to resolve issues before they can occur. You should not need to pour into log files and events to know if a backup was successful or if an error occurred. Intelligence is ubiquitous to modern management systems, and customers are demanding new solutions that drive forward AI and proactive learning investments. However, today's businesses still face many challenges when it comes to updating their management solutions, including:

- **Frustration with wasted resources trying to piece together fragmented monitoring systems to get a true picture of backup health**
- **Uncertainty about storage usage and projections and having to pay a premium for unplanned storage purchases**
- **Pressure to have zero disruption from unexpected downtime, even when unavoidable problems occur**
- **Fighting an ongoing battle to prove the reliability of full recovery and meet business SLA requirements**

Veeam® enables organizations of all sizes to reduce the complexity of their data management tasks, saving precious time and budget and providing AI-driven infrastructure monitoring and diagnostics, including automated remediation of unexpected issues for your critical backup and DR processes. Modern data management needs to be always vigilant, intelligent and reactive to resolve issues before they occur. Through Veeam's modern monitoring and analytics approach, you can have the confidence that your data is well-managed with:

- **Built-in intelligence to identify and resolve common infrastructure and software misconfigurations before operational impact**
- **Knowing your data protection posture instantly through consistent monitoring and reporting**
- **AI-based diagnostics and remediation to resolve issues faster, even before they arise**
- **Visibility into the costs of storage and backup repository resources to forecast resource and utilization rates**

Solution Mapping

Veeam Cloud Data Management Platform provides the key technologies to assist your monitoring and analytics platform. Together it enables a powerful integrated solution.

Capacity Planning and Forecasting

Chargeback and Billing

Infrastructure Assessment Reporting

Backup Compliance Reporting

Intelligent Diagnostics

Business View

Ransomware Planning

Remediation Actions

Veeam Backup & Recovery | Veeam ONE

Monitoring and Analytics

Each feature of the Veeam Cloud Data Management Platform is specifically designed to help organizations more, including significant solutions such as:

Intelligent Diagnostics	Business View	Remediation Actions	Capacity Planning reporting
Automatically detect known issues in configuration and performance of backup infrastructure	One-stop reporting for the entire business to review backup and recovery health and RPO/RTO expectations	Automated responses to unexpected issues across your backup and recovery infrastructure	Forecast future models and trends to take the guesswork out of capacity planning
